## Profile

Computer Science undergraduate specializing in AI and web development with strong problem-solving skills(DSA) and a passion for building impactful software solutions and Hackathon Winner.

## My Work

**creator** *Spora*

Jan-2026 - Present

Built Spora, a next-generation social media platform featuring personalized content discovery, short videos, articles, and real-time user interactions. <https://play.google.com/apps/testing/com.anilkumar09.news>

**creator**

Built Invisly, an AI-powered desktop interview assistant designed to provide real-time support during technical interviews, helping candidates analyze questions and generate relevant responses quickly.- <https://invisly.in/>

## Education

**B.E. in Computer Science - 8.09**

Aug 2022 - Present

*New Horizon College of Engineering, Bengaluru*

- Computer Science undergraduate specializing in AI and web development with strong problem-solving skills(DSA) and a passion for building impactful software solutions and Hackathon Winner.

## Projects

**ML Stock Price Prediction System**

May 2025 - June 2025

- A machine-learning powered system that predicts future stock prices using historical market data and time-series forecasting models. Trained and tested multiple algorithms including Linear Regression, Random Forest, and LSTM neural networks to evaluate accuracy and improve predictive performance.

**Vibe-Coding (Polo)**

Jan 2025 - Mar 2025

- An AI-driven coding platform that takes user input and generates complete, production-ready web-sites automatically. Functions similar to platforms like Lovable or Bolt, enabling users to build web applications without manual coding.

**AI-Powered Interview Preparation Platform**

Aug 2024 - Sep 2024

- Full-stack web app with AI voice interviews and blockchain credential verification.

## Research(I Am Working On)

Researching SCBI (Self-Consistent Basis Invention): an inference-time representation-learning architecture that aims to let frozen foundation models discover, validate, and reuse latent problem-solving representations without permanent weight updates.

## Skills

- Python, Java, JavaScript, SQL, Next.js, React, Node.js, Express.js, Tailwind CSS, MongoDB, MySQL, Vector Databases, AWS, Google Cloud Platform, Docker, Git/GitHub, LangChain, RAG, MCP, PyTorch, Scikit-learn, Production-ready LLM pipelines & DSA

## Award

**CIDECODE Hackathon (PES University)** *Finalist for AI-Powered Problem Solving*
